- 1 Executive Summary
- 2 Methodology & Tooling
- 3 Audit Scorecard
- 4 Detailed Findings
- 5 Visual Comparison: Atlas South vs ABM
- 6 Comparative Analysis
- 7 What Atlas South Already Does Better
- 8 Improvement Plan — Page by Page
- 9 Improvement Plan — Function by Function
- 10 Phased Delivery Roadmap
- 11 Appendix: Measured Data

At a glance

The single most important finding

The site has **no analytics of any kind** — no Google Analytics, no Tag Manager, no pixel, no server-side tracking. There is currently *no way to measure* whether the redesign improves anything. Installing measurement must be the first task of Sprint 1, before any visual work begins, so that a genuine before/after baseline exists.

1 • Executive Summary

Atlas South's website is **structurally healthier than it first appears**. It is not the single-scroll brochure page it resembles: there are 13 live pages, including eight genuine service pages, each with unique copy (measured content overlap between service pages is only 7.2%, which is low and good). Titles and meta descriptions are written on every page, a sitemap and robots.txt exist, HTTPS and HSTS are enabled, forms carry spam protection, and there is a GDPR cookie banner.

The score of **48/100** is driven almost entirely by *missing layers* rather than broken ones. Specifically, four things are absent site-wide and each is individually cheap to fix:

- **Structured data (JSON-LD)** — 0 of 13 pages. No `LocalBusiness`, `Service`, `Review` or `FAQPage` markup, so Google cannot generate rich results for a business whose entire market is local search.
- **Open Graph / Twitter Card tags** — 0 of 13 pages. This matters unusually much here: WhatsApp is a primary sales channel for Atlas South, and a link pasted into WhatsApp currently previews with no image, no title card and no description.
- **Security response headers** — no CSP, no `X-Frame-Options`, no `X-Content-Type-Options`, no `Referrer-Policy`.
- **Photography** — the entire site contains three images, all of which are the logo or UI chrome. There is not one photograph of a job, a van, a uniform or a team member. Service iconography is rendered with emoji (🔧 ⚡ 🧑‍🔧), which reads as improvised at the commercial tier Atlas South is trying to win.

Against ABM, the gap is **not primarily information architecture** — Atlas South already has per-service pages, an industries section, pricing and multiple conversion paths, and in some respects (transparent pricing, self-serve quote forms, instant contact) it is *ahead* of ABM, which offers none of those. The gap is in **credibility signalling**: real imagery, case studies, proof of work, machine-readable trust markers, and a visual language that does not rely on emoji.

The strategic read

Atlas South does not need to be rebuilt from zero. It needs (a) a measurement layer, (b) the missing machine-readable layers, (c) a photography and design-system pass, and (d) expansion of the pages that already exist in outline — industries and service areas — into real landing pages. That is a sequence of additive sprints, not a demolition.

Top ten priorities

#	ACTION	SEVERITY	CATEGORY	EFFORT
1	Install analytics + conversion tracking to establish a baseline	CRITICAL	Measurement	Low
2	Resolve the phone-number inconsistency across pages	CRITICAL	Local SEO / Trust	Low
3	Add real photography; remove emoji iconography	CRITICAL	Design / Credibility	High
4	Add Open Graph + Twitter Card tags to all pages	HIGH	SEO / Social	Low
5	Add JSON-LD structured data (LocalBusiness, Service, Review, FAQ)	HIGH	SEO	Medium
6	Fix ~90 dead # links across the site	HIGH	UX / Crawlability	Low
7	Add security response headers (CSP, XFO, XCTO, Referrer-Policy)	HIGH	Security	Low
8	Extract shared CSS/JS to cached external files; add Cache-Control	HIGH	Performance	Medium
9	Label all form inputs; fix contrast and tap-target failures	MEDIUM	Accessibility	Medium
10	Build industry and service-area landing pages	MEDIUM	SEO / Content	High

2 · Methodology & Tooling

Note on tooling — please read

This audit was **not** produced by SquirrelScan. The `squirrel` CLI referenced by the standard audit workflow is not installed on this machine, so no SquirrelScan health score exists for this site. Every score in this document was produced by a **custom measurement pass written for this audit**, against a transparent rubric published in §3. All underlying measurements are listed in the Appendix so the scores can be independently checked or recalculated.

If you would like the official SquirrelScan 230-rule score alongside this one, install the CLI from squirrelscan.com/download and the audit can be re-run to produce directly comparable numbers.

What was measured, and how

LAYER	METHOD	COVERAGE
HTML / SEO metadata	Direct HTTP fetch + parse of every page	All 13 live pages
Response headers	<code>curl -I</code> and <code>fetch</code> header inspection	All 13 pages + ABM homepage
Rendered DOM	Live JavaScript execution in a real browser session	Homepage
Colour contrast	WCAG 2.1 relative-luminance computed on rendered elements	Homepage
Tap targets	Bounding-box measurement of all interactive elements	Homepage @1280px
Screenshots	Headless Chrome via DevTools Protocol, 1440px desktop & 390px mobile	Both sites
Duplicate content	5-gram Jaccard similarity between all service-page pairs	8 service pages
Crawlability	<code>robots.txt</code> , <code>sitemap.xml</code> , 404 status verification	Site-wide

Known limitations

- Contrast and tap-target analysis was run on the homepage only, at a 1280px desktop viewport. A small number of flagged contrast items are false positives caused by gradient-clipped text (e.g. the outlined *"FIRST TIME."* headline); only independently confirmed failures are cited in §4.
- Core Web Vitals (LCP, CLS, INP) were **not** measured — no field data exists because the site has no analytics. Performance findings here are based on transfer size, TTFB, caching and request-count analysis, which are leading indicators rather than the vitals themselves.
- The ABM benchmark covers its homepage only; ABM's inner pages were not crawled.
- The ABM full-page screenshot is truncated at 7,000px (page height 8,344px) and some of its lazy-loaded carousels did not paint during capture.

3 · Audit Scorecard

Overall health score: 48 / 100 — Grade F

Grade scale: **A** 90–100 · **B** 80–89 · **C** 70–79 · **D** 60–69 · **E** 50–59 · **F** below 50. Target for the redesign programme: **85+ (Grade B)**.

Category scores

SEO		53 · E
Performance		64 · D
Mobile		68 · D
Accessibility		49 · F
Technical		42 · F
Content & UX		36 · F
Security		33 · F

How the overall score is composed

CATEGORY	SCORE	WEIGHT	CONTRIBUTION	DOMINANT DEDUCTIONS
SEO	53	22%	11.66	No schema, no social meta, partial canonicals, NAP conflict
Content & UX	36	20%	7.20	No photography, no case studies, dead links, no measurement
Accessibility	49	14%	6.86	Unlabelled inputs, no landmarks, contrast, tap targets
Security	33	14%	4.62	Five response headers absent
Performance	64	14%	8.96	No caching headers, ~1s TTFB, duplicated inline assets
Mobile	68	8%	5.44	15,168px page height, small tap targets
Technical	42	8%	3.36	No build system, no shared assets, no tooling
Overall	48	100%	48.10	Grade F

SEO rating in detail — 53/100

Because SEO carries the heaviest weight and is the metric most often asked about, its ten sub-criteria are published in full:

SEO CRITERION	SCORE	EVIDENCE
Indexability	9 / 10	<code>robots.txt</code> allows all; correct 404 status codes; no accidental noindex
Title tags	8 / 10	Unique and descriptive on all 13 pages; homepage 116 chars (truncates in SERPs)
Meta descriptions	8 / 10	Present on all 13; <code>about</code> 184 and <code>careers</code> 172 chars exceed ~160 limit
Sitemap & robots	8 / 10	Both present and linked; sitemap omits <code>about.html</code> and <code>careers.html</code>
Heading structure	7 / 10	Exactly one H1 per page (good); 2–3 hierarchy skips per page (h2→h4, h3→h5)
Internal linking	6 / 10	Sound cross-linking, undermined by ~90 dead <code>#</code> placeholder links
Canonical tags	4 / 10	Present on 7 of 13 pages; missing on homepage, security, about, careers, both legal pages
Local SEO / NAP	3 / 10	Two different phone numbers in use; five formatting variants; no LocalBusiness schema

SEO CRITERION	SCORE	EVIDENCE
Structured data	0 / 10	Zero JSON-LD blocks across all 13 pages
Social metadata	0 / 10	Zero Open Graph and zero Twitter Card tags across all 13 pages
SEO total	53 / 100	Grade E — strong fundamentals, absent machine-readable layer

Why this score is encouraging rather than alarming

Six of the ten SEO criteria already score 6/10 or better — the hard, slow parts (unique copy, sensible titles, page structure, crawlability) are done. The four weak criteria are all *additive*: schema, social tags, canonicals and NAP consistency are template-level changes that do not require rewriting a single page of content. A realistic SEO score after Sprint 1 is **80+**.

4 · Detailed Findings

4.1 · SEO — 53/100

SEVERITY	FINDING	DETAIL & RECOMMENDATION
HIGH	No structured data anywhere	0 JSON-LD blocks on 13/13 pages. Add LocalBusiness (with address, geo, opening hours, phone), Service per service page, AggregateRating / Review for testimonials, FAQPage for common questions and BreadcrumbList for hierarchy. For a local trades business this is the single highest-leverage SEO change available.
HIGH	No Open Graph or Twitter Card tags	0 OG and 0 Twitter tags on 13/13 pages, versus 4 and 4 on ABM's homepage. Because WhatsApp is a primary channel here, every shared link currently renders as a bare URL with no preview card. Add og:title , og:description , og:image (1200×630), og:url , og:type , og:site_name and twitter:card .
HIGH	Conflicting phone numbers (NAP)	Five service pages advertise 020 335 52797 while the homepage, footer and all other pages use 07778 858278 ; both appear as tel: targets on the same pages. The mobile number is additionally formatted five different ways (07778 858278 , 0777 8858 278 , 0777 8858278 , 0777885 8278 , 0777 88 58278). Inconsistent NAP data directly damages local pack rankings and looks careless to visitors. Pick one number and one format, site-wide.
HIGH	"Areas We Cover" links are dead	All six area links (Central, South East, North, East, West London, Surrey & Kent) point to # . These are the highest-intent local-SEO keywords Atlas South could own and are currently worth nothing. Convert each into a real service-area landing page.
MEDIUM	Canonical tags on only 7 of 13 pages	Missing on index , security , about , careers , terms-of-use , privacy-policy . The homepage is reachable as / , /index.html , with and without www — a canonical is required to consolidate signals.
MEDIUM	Heading hierarchy skips	2–3 skipped levels per page (h2→h4 and h3→h5) on 9 of 13 pages. Harms both semantics and screen-reader navigation.
MEDIUM	Homepage title too long	116 characters; Google truncates near 60. Front-load the primary keyword and shorten.
LOW	Sitemap incomplete	11 URLs listed; about.html and careers.html are absent.
LOW	No favicon declared	No <link rel="icon"> in the markup on any page.
LOW	lang="en" not en-GB	Minor localisation signal for a UK-only business.
LOW	Obsolete meta keywords	Present on the homepage; ignored by all major engines since 2009. Harmless but worth removing.
STRENGTH	Service-page copy is genuinely unique	Average 5-gram overlap between the eight service pages is just 7.2% (highest pair 11.2%). There is no thin-content or duplicate-content risk — a real asset that many multi-service trade sites fail.

4.2 · Performance — 64/100

SEVERITY	FINDING	DETAIL & RECOMMENDATION
HIGH	No caching headers at all	No Cache-Control , no Expires , no ETag policy on any page. Every repeat visit re-downloads everything. Add long-lived caching for static assets and a sensible revalidation policy for HTML.
HIGH	226KB of inline CSS/JS duplicated across pages	Each page carries ~36KB of inline CSS and ~11KB of inline JS. Across 13 pages that is 226KB that can never be cached or reused . Extracting to two shared external files would make every page after the first dramatically cheaper, and would cut homepage HTML from 128KB to roughly 80KB.
MEDIUM	Server TTFB ~1.0–1.5s	Measured 0.98s–1.52s across pages (homepage 1.04s). For static HTML on Apache this is slow; the target is under 0.6s. Investigate host performance and consider a CDN.
LOW	Google Fonts render-blocking	Single external stylesheet loading 9 font weights. display=swap is correctly set. Add preconnect , and trim unused weights.
STRENGTH	Very lean request profile	Gzip is enabled (130KB → 56KB on the wire), there is exactly one external resource, zero external JavaScript, and only 650 DOM nodes. This is a genuinely fast-rendering front

SEVERITY	FINDING	DETAIL & RECOMMENDATION
		end — the problems are all server-side and architectural.

4.3 · Security — 33/100

SEVERITY	FINDING	DETAIL & RECOMMENDATION
HIGH	No Content-Security-Policy	Absent. ABM sets at least <code>frame-ancestors 'self'</code> . Add a policy covering scripts, styles, images and form-action.
MEDIUM	No X-Frame-Options	Site can be framed — clickjacking exposure. ABM sets <code>SAMEORIGIN</code> .
MEDIUM	No X-Content-Type-Options	MIME-sniffing not disabled. Add <code>nosniff</code> .
MEDIUM	No Referrer-Policy	Full URLs leak to third parties. Add <code>strict-origin-when-cross-origin</code> .
MEDIUM	Form data posts to a third party	Both forms submit personal data (name, phone, email, postcode, property type) to <code>forms submit.co</code> . Confirm this processor is named in the privacy policy and covered by a GDPR processing agreement, or move to a first-party endpoint.
LOW	No Permissions-Policy	Absent.
LOW	Server banner disclosed	<code>Server: Apache</code> exposed (version is not — good).
LOW	<code>rel="noopener"</code> missing	Seven external links on the homepage lack it.
STRENGTH	HTTPS + HSTS enabled	<code>max-age=15552000; includeSubDomains</code> — 180 days. Notably, ABM does not set HSTS at all . Consider extending to one year and adding <code>preload</code> .
STRENGTH	Form spam protection present	Honeypot field is implemented on both forms.

4.4 · Accessibility — 49/100

SEVERITY	FINDING	DETAIL & RECOMMENDATION
HIGH	26 form inputs without programmatic labels	Across the two homepage forms, 26 of the inputs have no associated <code><label for></code> , <code>aria-label</code> or wrapping label. Screen-reader users cannot reliably complete the quote form — the site's primary conversion path.
HIGH	WhatsApp button contrast 1.98:1	White text on WhatsApp green <code>#25D366</code> . WCAG AA requires 4.5:1 for normal text. Darken the green or switch the label to near-black.
MEDIUM	Body text contrast 4.32:1 at 12.5px	Muted grey <code>#6A7A9A</code> on white, used throughout the Industries and Services card descriptions. Just below the 4.5:1 threshold, and the 12.5px size compounds it.
MEDIUM	70 of 110 interactive elements below 44x44px	Measured at 1280px desktop; the header navigation links are only 15px tall. WCAG 2.5.8 recommends a minimum 44x44px target.
MEDIUM	No landmark regions	No <code><main></code> and no <code><header></code> element on the homepage (<code><nav></code> and <code><footer></code> are present). Screen-reader users cannot skip to content.
MEDIUM	Emoji used as meaningful icons	Service and industry icons are emoji characters without <code>aria-hidden="true"</code> , so assistive technology announces them literally ("shield emoji", "sparkles emoji") in the middle of headings.
MEDIUM	No skip-to-content link	Absent on all pages.
LOW	One unlabelled button	A control with no accessible name.
STRENGTH	All images have alt text	3 of 3 images carry meaningful alt attributes; <code>lang</code> is declared.

4.5 · Content & UX — 36/100

SEVERITY	FINDING	DETAIL & RECOMMENDATION
CRITICAL	No photography anywhere on the site	Three images site-wide, all logo or chrome, all base64-encoded. For a trades and security business, proof of work is the product. No completed jobs, no uniformed staff, no vans, no sites, no team. ABM's homepage carries 103 images and a video hero.
CRITICAL	No analytics or conversion tracking	Zero external scripts; no GA4, no Tag Manager, no pixel. Conversions, traffic sources and drop-off are entirely unmeasured, and the redesign has no baseline to be judged against.

SEVERITY	FINDING	DETAIL & RECOMMENDATION
HIGH	~90 dead placeholder links	7 on the homepage ("Work With Us" plus all six service areas) and 12 on each of the eight service pages. Every one is a dead end for users and a wasted crawl path.
HIGH	Emoji as primary iconography	 render inconsistently across operating systems and undercut the credibility Atlas South needs to win healthcare, corporate and construction contracts.
MEDIUM	Industries section has no destination pages	Eight industries are presented as cards but none links anywhere. ABM gives each of its 13 industries a full page — this is the clearest structural borrow available.
MEDIUM	Only three testimonials, no case studies	Reviews are real and attributed (a strength), but there is no depth: no before/after, no project detail, no client logos, no outcomes.
MEDIUM	No dedicated thank-you page	Forms redirect to <code>/?sent=1#booking</code> . Without a distinct URL there is no clean conversion event to track, and no opportunity to set expectations after submission.
MEDIUM	Unbranded 404 page	Returns a correct 404 status (good) but serves a bare 236-byte Apache default page with no navigation back into the site.
LOW	No blog or insights content	No vehicle for informational search traffic or seasonal demand (frozen pipes, EICR deadlines, end-of-tenancy season).
STRENGTH	Transparent pricing published	Three tiers with explicit monthly prices and feature comparison. ABM publishes no pricing at all — this is a real competitive advantage and should be protected in the redesign.
STRENGTH	Conversion paths are strong	Two on-page quote forms, phone and WhatsApp CTAs repeated throughout, urgency and property-type qualifiers built into the form. ABM offers none of this.

4.6 · Mobile — 68/100 & Technical — 42/100

SEVERITY	FINDING	DETAIL & RECOMMENDATION
MEDIUM	Mobile homepage is 15,168px tall	Nearly twice ABM's 8,189px. That is roughly 18 full phone screens of scrolling to reach the footer. Condense sections, introduce accordions, and move secondary content to dedicated pages.
HIGH	No shared asset architecture	13 hand-maintained HTML files each carrying their own copy of the full stylesheet. A single design change — a colour, a button radius, a nav item — requires editing 13 files consistently. This is the main reason the redesign needs a templating or component step before large-scale visual work begins.
MEDIUM	No build or deployment pipeline	No minification, no bundling, no automated deployment, no staging environment identified.
LOW	.html URL extensions	Cosmetic, but <code>/services/plumbing</code> reads better and is more durable than <code>/plumbing.html</code> .
STRENGTH	Responsive layout works	Viewport meta is correct and the layout adapts cleanly at 390px — the mobile experience is long, but it is not broken.

5 · Visual Comparison: Atlas South vs ABM

5.1 · Above the fold

Atlas South — 1440px desktop. Dark navy field, condensed uppercase display type, three competing primary CTAs (Book / WhatsApp / View Services), and a six-card service grid using emoji icons. No photography. Credibility rests entirely on typography and the stats row.

ABM — 1440px desktop. Full-bleed video of real work being performed, light interface, a single focused CTA (“Speak with the Experts”), sentence-case humanist type, and an announcement bar carrying corporate news. Credibility rests on imagery and restraint.

The core visual lesson

ABM's hero does *less* and shows *more*. One message, one button, and real footage of the service being delivered. Atlas South's hero asks the visitor to choose between three actions before showing a single piece of evidence that the work is good. The highest-value visual change is not a new colour palette — it is **replacing emoji with photography and reducing the hero to one primary action.**

5.2 · Whole-page structure

Atlas South
1440 × 8,046px

ABM
1440 × 8,344px (truncated at 7,000px)

At the whole-page scale the two sites are almost the same length — the difference is *rhythm*. ABM alternates generous white space, imagery and colour blocks; Atlas South runs dense card grids with little breathing room between sections. Note also how much of ABM's page is given to a single idea at a time.

5.3 · Mobile

The mobile comparison is the starkest in this document. Atlas South's homepage is **85% longer** on a phone than ABM's, because the desktop card grids stack into single columns without being condensed. Given that trade enquiries skew heavily mobile, this is a material conversion risk.

5.4 · Atlas South section detail

Services — eight cards, emoji icons, repeated “LEARN MORE →”. Clear, but visually flat and unevicenced.

Industries — eight sectors presented as cards. **None of these links anywhere.** The clearest expansion opportunity on the site.

Monthly packages — genuinely strong. Transparent tiers, clear feature comparison, explicit inclusions/exclusions. Protect this in the redesign.

Quote form — well-qualified (service, urgency, property type). Undermined by 26 unlabelled inputs and no dedicated thank-you page.

Closing contact block — repeats phone, WhatsApp and email with a second form. Strong intent capture; the duplicate form should share one component and one tracking event.

5.5 · Service page template

plumbing.html
1440 × 5,076px

security.html
1440 × 4,945px

The service-page template is consistent and the copy on each is genuinely distinct (7.2% average overlap). What it lacks is evidence: no photographs of completed work, no certifications shown as artefacts, no case study, no FAQ block, and 12 dead links per page.

6 · Comparative Analysis

6.1 · Technical head-to-head

MEASURE (HOMEPAGE)	ATLAS SOUTH	ABM	READ
Open Graph tags	0	4	Atlas behind
Twitter Card tags	0	4	Atlas behind
JSON-LD blocks	0	2	Atlas behind
Canonical tag	No	Yes	Atlas behind
Images on page	3	103	Atlas far behind
External scripts	0	15	Atlas lighter
HTML size (gzipped)	56KB	~150KB raw	Atlas lighter
DOM nodes	650	Much higher	Atlas lighter
HSTS	Yes	No	Atlas ahead
CSP	No	Partial	Atlas behind
X-Frame-Options	No	SAMEORIGIN	Atlas behind
Cache-Control	None	Set	Atlas behind
Published pricing	Yes	No	Atlas ahead
On-page quote form	2 forms	None	Atlas ahead
Analytics	None	Present	Atlas behind
Mobile page height	15,168px	8,189px	Atlas behind

6.2 · Positioning and audience

DIMENSION	ATLAS SOUTH	ABM
Scale	London & South East, founded 2018	Global facilities management
Buyer	Homeowners, landlords, SMEs, plus emerging commercial	Enterprise procurement and facilities directors
Tone	Urgent, direct, concrete ("YOUR HOME. FIXED RIGHT.")	Strategic, abstract ("Where others see a facility, we see possibility.")
Sales motion	Self-serve — call, WhatsApp, submit, subscribe	Consultative — brochure download, "Speak with the Experts"
Proof	Stats row, 3 reviews, named certifications	Imagery, industry breadth, brand scale, sustainability narrative
Primary CTA	Three competing (Book / WhatsApp / View Services)	One ("Speak with the Experts")

6.3 · What to borrow — and what not to

Borrow from ABM

- **Real imagery as the primary credibility device** — photography of actual work, staff and sites.
- **Industry pages with their own URLs** — turn the eight existing industry cards into eight real pages.
- **One primary CTA per view** — reduce hero decision load.
- **Whitespace and single-idea sections** — pacing, not density.
- **A downloadable capability document** — the equivalent of "Possibility in Action" for commercial prospects.
- **Machine-readable trust layer** — canonical, OG, JSON-LD as standard on every template.

Do not borrow from ABM

- **Removing pricing.** ABM hides it because enterprise deals are bespoke. Atlas South's transparent tiers are a differentiator against local competitors — keep them prominent.
- **Removing instant contact.** ABM has no on-page form, no phone-first CTA and no WhatsApp. For a 24/7 emergency trade business those are the conversion engine.
- **Abstract corporate language.** "Gas Safe registered", "Part P certified", "SIA-licensed" are more persuasive to this buyer than "driving possibility".
- **Heavy script loading.** ABM runs 15 external scripts; Atlas South's zero-JS front end is a genuine performance asset worth protecting.

7 · What Atlas South Already Does Better

A redesign that only chases ABM risks discarding advantages Atlas South already holds. These should be treated as protected assets with explicit regression tests at the end of every sprint.

ASSET	EVIDENCE	WHY IT MATTERS
Transparent published pricing	Three tiers, £75 / £180 / £450, with full feature comparison	ABM publishes nothing. Buyers self-qualify before contact, shortening the sales cycle and filtering out price-mismatched leads.
Self-serve conversion	Two on-page quote forms with service, urgency and property-type qualifiers	ABM has no equivalent. A visitor can convert in under a minute without speaking to anyone.
Instant human contact	Phone and WhatsApp CTAs repeated throughout; 24/7 line	Decisive for emergency trade work, where the first responder usually wins the job.
Genuinely unique service copy	7.2% average overlap across eight service pages	No duplicate-content risk. This is the slow, expensive part of SEO and it is already done.
Concrete credential language	Gas Safe, Part P, EICR, SIA-licensed, DBS checked	Specific and verifiable, where ABM's messaging is abstract.
Exceptionally lean front end	0 external scripts, 1 external stylesheet, 650 DOM nodes	Fast rendering by default. Protect this when adding imagery and analytics.
HSTS enabled	<code>max-age=15552000;</code> <code>includeSubDomains</code>	Ahead of ABM, which sets no HSTS at all.
GDPR cookie consent	Granular necessary / analytics / marketing toggles	Already compliant-by-design, and ready for the analytics rollout in Sprint 1.
Real, attributed reviews	Named clients with locations (Walthamstow E17, Maida Vale W9)	Specific and believable. Needs volume and depth, not replacement.

8 · Improvement Plan — Page by Page

Every existing page, plus every page proposed. **KEEP** means the page stays and is improved in place; **NEW** means it does not yet exist.

8.1 · Existing pages

index.html **KEEP** — 1,506 words · 128KB · 8,046px

ISSUE FOUND	CHANGE	SPRINT
Title 116 chars; no canonical; no OG; no schema	Shorten title to ≤60; add canonical, full OG/Twitter set, LocalBusiness + AggregateRating JSON-LD	1
7 dead # links (Work With Us + 6 areas)	Point to the new careers and service-area pages	1 / 6
Emoji icons across hero, services, industries	Replace with a commissioned icon set; add aria-hidden	2
No photography	Photographic hero; real job imagery in service and industry cards	2 / 3
Three competing hero CTAs	One primary (Get a Quote); phone and WhatsApp become persistent secondary	3
Industries cards link nowhere	Link each to its new industry page	5
26 unlabelled inputs; contrast failures	Label every input; fix WhatsApp green and muted body text	1 / 8
15,168px mobile height	Condense sections; accordion the industries and packages blocks	3
Two near-duplicate forms	Single shared form component, one tracked conversion event	7

The eight service pages **KEEP**

security · plumbing · electrical · painting · handyman · domestic-cleaning · commercial-cleaning · property-maintenance — 830–958 words each, ~31–34KB, consistent template.

ISSUE FOUND	CHANGE	SPRINT
Wrong phone number — five pages advertise 020 335 52797	Standardise to one number and one format site-wide	1
12 dead # links per page (~96 total)	Resolve to real destinations or remove	1
No Service or FAQPage schema	Add both per page, plus BreadcrumbList	1
Canonical missing on security.html	Add; audit the other seven	1
No on-page quote form	Embed the shared form, pre-filled with that service	7
No imagery, no case study, no FAQ	Add a job gallery, one case study and a 5-question FAQ per page	4
Heading skips (h2→h4, h3→h5)	Correct hierarchy in the shared template	4
No certification artefacts	Show the actual Gas Safe / Part P / SIA credentials as verifiable badges	4

about.html **KEEP** — 1,047 words

ISSUE FOUND	CHANGE	SPRINT
No canonical; description 184 chars; not in sitemap	Add canonical, trim description, add to sitemap	1
No team imagery or named leadership	Add founder story, team photographs, named leads	4
No Organization schema	Add, with founding date and address	1

ISSUE FOUND	CHANGE	SPRINT
No accreditation detail	Add an insurance, DBS and licensing section	4

careers.html KEEP — 1,744 words · has an application form

ISSUE FOUND	CHANGE	SPRINT
Not in sitemap; no canonical; description truncated at 172 chars	Fix all three	1
Homepage “Work With Us” does not link here	Wire the link	1
No JobPosting schema	Add per role — enables Google Jobs listings	5
Application form not tracked	Add conversion tracking and a thank-you state	7

privacy-policy.html & terms-of-use.html KEEP

ISSUE FOUND	CHANGE	SPRINT
No canonical tags	Add	1
Third-party form processor may not be disclosed	Confirm formsusubmit.co is named as a processor; verify GDPR basis	1
Analytics not yet covered	Update both documents before analytics goes live	1

8.2 · Proposed new pages

PAGE	COUNT	PURPOSE	SPRINT
Industry pages healthcare, education, events, construction, corporate, residential, retail, property	8	Give the existing homepage industry cards real destinations. Sector-specific proof, compliance language and case studies. The clearest ABM borrow.	5
Service-area pages Central, South East, North, East, West London, Surrey & Kent	6	Replace the six dead footer links. Highest-intent local search terms, each with local jobs and reviews.	6
Case studies	6–10	Close the single biggest credibility gap. Before/after imagery, scope, timeline, outcome.	6
Dedicated packages page	1	Give pricing its own indexable URL rather than a homepage anchor; room for comparison and FAQ.	7
Dedicated contact page	1	Own URL for “atlas south contact” searches; map, hours, coverage, LocalBusiness schema.	7
Thank-you page	1	Clean conversion URL for tracking; sets response-time expectations after submission.	7
Branded 404	1	Replace the bare Apache default with navigation and a search or contact prompt.	1
Accreditations page	1	Gas Safe, Part P, SIA, insurance, DBS as verifiable artefacts for commercial procurement.	4
Insights / blog	ongoing	Informational and seasonal search capture; supports E-E-A-T signals.	9

Site size after the programme: 13 pages today → approximately **38–42 pages**, with every page carrying canonical, OG and schema by template default.

9 · Improvement Plan — Function by Function

Navigation

CURRENT	TARGET	SPRINT
Header mixes real pages with homepage anchors; 15px tap height	Consistent page-based nav; dropdowns for Services and Industries; 44px minimum targets	3
No breadcrumbs	Breadcrumbs on all inner pages with BreadcrumbList schema	4
Footer contains 7 dead links	All links resolve; footer becomes the service-area and industry hub	1 / 6
No search	Optional site search once the page count passes ~30	9

Quote & contact forms

CURRENT	TARGET	SPRINT
Two near-duplicate forms, hand-maintained	One shared component, context-aware defaults per page	7
26 inputs without labels	Every input labelled; full keyboard and screen-reader pass	1
Posts to formsubmit.co ; captcha disabled	Confirm GDPR processing basis; keep the honeypot; evaluate a first-party endpoint	1 / 7
Redirects to /?sent=1	Dedicated /thank-you page as a clean conversion URL	7
No validation feedback or submission state	Inline validation, loading state, explicit success and failure messaging	7
No tracking	Conversion event per submission, segmented by service and urgency	1 / 7

Subscription packages

CURRENT	TARGET	SPRINT
Three tiers on a homepage anchor; Stripe/PayPal indicated	Own indexable page; verify the live checkout path end to end	7
No Offer schema	Add per tier — enables price display in search results	7
No comparison view or FAQ	Comparison table plus billing, cancellation and coverage FAQ	7

WhatsApp & phone

CURRENT	TARGET	SPRINT
Conflicting numbers across pages	Single number, single format, defined once in the template	1
WhatsApp button fails contrast at 1.98:1	Accessible colour pairing that stays recognisably WhatsApp	8
Click-throughs untracked	Track tel: and wa.me clicks as micro-conversions	1
Shared links have no preview card	OG image and title so WhatsApp shares render properly	1

Cookie consent & analytics

CURRENT	TARGET	SPRINT
Granular banner exists but governs nothing — no analytics installed	GA4 (or equivalent) wired to the existing consent toggles	1
No baseline metrics	Two to three weeks of baseline traffic and conversion data before visual work starts	1
No Search Console	Verify property; submit sitemap; monitor indexation and queries	1

Testimonials & proof

CURRENT	TARGET	SPRINT
Three static reviews, no schema	Expanded set with <code>Review</code> / <code>AggregateRating</code> markup	1 / 6
No case studies, no client logos	Case study library, filterable by service and industry	6
No third-party review integration	Connect Google Business Profile / Trustpilot	9

Asset & template architecture

CURRENT	TARGET	SPRINT
226KB inline CSS/JS duplicated across 13 files	Shared external stylesheet and script, cached and versioned	2
No design tokens	Documented colour, type, spacing and component tokens	2
No templating — 13 hand-edited files	Header, footer, nav, form and card as reusable partials or components	2
No build or staging	Build step, staging environment, deployment pipeline	2
No caching or security headers	Server config for <code>Cache-Control</code> , CSP, XFO, XCTO, Referrer-Policy	1

10 · Phased Delivery Roadmap

Sequenced so that measurement precedes change, architecture precedes visual work, and templates precede page production. Sprint numbering continues from the Sprint 0 foundations already agreed.

SPRINT	THEME	SCOPE	EXIT CRITERIA
1	Measurement & quick wins	Analytics + Search Console; fix the phone-number conflict; add OG, canonicals and core schema; repair ~90 dead links; security and caching headers; label form inputs; branded 404; sitemap completion	Baseline data flowing; SEO sub-score ≥80
2	Design system & architecture	Extract shared CSS/JS; design tokens; component library; templating; build and staging pipeline; commission photography and a custom icon set	One template change propagates to all pages
3	Homepage rebuild	Photographic hero; single primary CTA; condensed mobile layout; real icons; restructured sections	Mobile height under 9,000px; hero converts at or above baseline
4	Service pages	All eight rebuilt on the new template: imagery, FAQ blocks, certification artefacts, embedded forms, corrected heading hierarchy; accreditations page	Eight pages live with schema and forms
5	Industry pages	Eight new sector pages with tailored proof and compliance language; JobPosting schema on careers	Homepage industry cards all resolve
6	Local & proof	Six service-area pages; case study library; expanded reviews with schema	Zero dead links site-wide; local pages indexed
7	Conversion	Unified form component; thank-you page; packages and contact pages; checkout verification; full funnel tracking	Every conversion path tracked end to end
8	Accessibility & performance	WCAG 2.1 AA pass — contrast, tap targets, landmarks, keyboard, screen reader; Core Web Vitals; image optimisation; TTFB and CDN	AA conformance; Vitals in the green
9	Content operations & launch	Insights/blog; third-party review integration; site search if warranted; redirect map; launch checklist	Overall score ≥85 (Grade B)

Sequencing rationale

Why analytics first: without a baseline there is no way to prove the redesign worked, and no way to catch a regression.

Why architecture before visuals: while the stylesheet is duplicated across 13 files, every design change costs 13× and drifts. **Why templates before new pages:** producing 23 new pages on the current architecture would multiply the maintenance problem rather than solve it.

Expected score trajectory

MILESTONE	OVERALL	SEO	DRIVER
Today	48 · F	53 · E	Baseline
After Sprint 1	~68 · D	~82 · B	Schema, OG, canonicals, headers, dead links, NAP
After Sprint 4	~78 · C	~86 · B	Photography, templates, service-page depth
After Sprint 8	~88 · B	~92 · A	Accessibility, performance, local and industry pages

Projections are estimates against this document's rubric, not guarantees, and assume the scope above is delivered in full.

11 · Appendix: Measured Data

A · Per-page measurements

PAGE	STATUS	SIZE	TTFB	TITLE	DESC	CANON	OG	SCHEMA	H1	SKIPS	WORDS
index.html	200	128KB	1.04s	116	168	—	0	0	1	2	1506

privacy-policy.html	200	53KB	1.02s	47	118	—	0	0	1	1	1668

B · Phone-number inconsistency (verbatim)

PAGE	TEL : TARGETS	NUMBERS DISPLAYED IN COPY
index	07778858278	07778 858278
security	07778858278	07778 858278
plumbing	07778858278, 02033552797	020 335 52797, 0777 8858 278, 0777 88 58278
electrical	07778858278, 02033552797	0777 8858278, 0777885 8278, 020 335 52797
painting	07778858278, 02033552797	020 335 52797, 0777 8858278
handyman	02033552797, 07778858278	020 335 52797, 0777 8858278
domestic-cleaning	07778858278	0777 8858 278, 07778858278
commercial-cleaning	07778858278	0777 8858 278
property-maintenance	07778858278, 02033552797	020 335 52797, 0777 8858 278
about / careers / legal	07778858278	07778 858278

The 0303 123 1113 appearing on the privacy policy is the ICO helpline and is correct.

C · Duplicate-content analysis (5-gram Jaccard)

SERVICE PAGE PAIR	OVERLAP
painting vs handyman	11.2%
domestic-cleaning vs commercial-cleaning	11.1%
painting vs property-maintenance	10.9%
handyman vs property-maintenance	10.3%
commercial-cleaning vs property-maintenance	10.3%
Average across all 28 pairs	7.2%

Well below the ~30% threshold at which duplicate-content concerns typically arise. This is a strength.

D · Response headers — homepage

HEADER	ATLAS SOUTH	ABM
strict-transport-security	max-age=15552000	absent
content-security-policy	absent	frame-ancestors 'self'
x-frame-options	absent	SAMEORIGIN
x-content-type-options	absent	absent
referrer-policy	absent	absent
permissions-policy	absent	absent
cache-control	absent	max-age=0, no-cache, no-store
content-encoding	gzip	gzip
server	Apache (version hidden)	hidden

E · Form configuration

Endpoints	forms submit.co/fm@atlassouthes.com and forms submit.co/ajax/fm@atlassouthes.com
Honeypot spam field	Present
Captcha	Disabled (_captcha = false)
Post-submit redirect	https://atlassouthes.com/?sent=1#booking — not a distinct page
Email subject	"New Booking Inquiry from Website"
Inputs without labels	26

F · Crawlability

robots.txt	Present · allows all · correctly references the sitemap
sitemap.xml	Present · 11 URLs · missing about.html and careers.html
404 handling	Correct 404 status, but a bare 236-byte Apache default page
Broken internal links	0 — every real page returns 200
Dead placeholder links	~90 (href="#")

Atlas South Technical Services — Website Audit & Comparative Analysis · v1.0 · 29 July 2026 · Prepared as part of Sprint 0 foundations. Scores are calculated against the rubric published in §3 of this document and are not SquirrelScan scores. All measurements are reproducible from the data in this appendix.
